

Logistics
SINCE 1921

An introduction to warehousing with LV Newcastle

Introducing the Team

- 
- A group of 15 team members, including men and women of various ages, are posed in a large warehouse. Some are wearing red jackets, while others are in dark clothing. They are standing in front of tall industrial shelving units. The floor is concrete, and there are some wooden pallets visible in the background.

Crane capability

Plus, forklift and Hiab
support

What this means for clients

Capacity for routine stockholding and project cargo

Specialist handling for oversized or time-critical movements

Local team coordinating intake, storage and dispatch

Operational visibility

System-led records support clear visibility from receipt through dispatch.

Receive

Store

Handle

Dispatch

Positioned for day-to-day warehousing and specialist logistics requirements.

When a piece of freight arrives at LV Newcastle, a unique GRN Number will be generated and recorded within a Customer specific Warehousing List which will be created internally with access granted to your nominated personnel. This automated list will allow for:

- Your cargo details to be stored in one place, giving all parties a clear view of what stock is held, where it is located, and its current status.
- The use of a structured system rather than manual paperwork or individual spreadsheets reduces the risk of missing information or errors.
- Every shipment to be tracked through its journey whilst within our warehouse, giving us a clear audit trail.
